

Press Release

European Copper Alloy Ingot Makers 2016 almost on previous year’s level

The economic environment of the European Copper Alloy Ingot Makers Industry did not change essentially compared to the previous year. In the current year a little increase is expected compared to 2016. Herein the positive economic trend in Europe gives the sales a push. Most member companies conceive the current situation as “normal” as well as the view to the next 12 months.

On the OECAM General Assembly in September 2017 in Dusseldorf Anton Bauer, G. Alt & Co. GesmbH, Austria was reelected as the President of OECAM.

The implementation phase of the EU- drinking water regulation is mindfully followed by the companies. The shortly appearing revised EN 1982 copper and copper-alloys gives evidences to alloys, which can be introduced for drinking water applications.

The threshold limits for copper at working places, which are in discussion currently, present a big challenge for companies.

The association has 15 member companies from 8 countries.
